

Aftercare Recommendations for your Pet's Microchip

- Keep your pet as quiet as possible for approximately 12 hours. This helps the tissues adhere to the chip to reduce any chance of migration. No dog park, no free running. Leashed walks are okay.
 - Keep implant site clean and dry - no baths for 24 hours.
 - No topical solutions for one week after implantation (i.e. flea and tick treatment).
 - Have chip scanned at each annual visit to a veterinarian.
 - Future vaccinations should be done in a different area than the chip implantation area.
 - Register your pet in the PetLink database with all current information.
-
